

CASE STUDY

The National Space Centre in Leicester was able to save on refilling time and strengthen their environmental policy with Knighton's washroom dispenser systems.

7 Hours
saved per week
on refilling

CHALLENGE

Knighton Janitorial were already supplying cleaning supplies for the venue when their washroom dispenser contract with another supplier came up for renewal. Knowing that system dispenser products could improve cost-in-use through controlled dispensing to one single sheet at a time, Knighton tendered for the contract and won.

SOLUTION

The housekeeping team have seen significant improvement in reduction of usage and subsequent time savings from not needing to refill dispensers as much. On average, they estimate saving an hour every morning during their daily routine, freeing them up to focus on other key areas. In addition, the reduction in product usage, waste and packaging also aligns with, and helps strengthen, the venue's all important environmental policy.
